Hettich

Quadro drawer runner with Stay Close

Best prospects for success in furniture retail:

- Concealed runners for a high quality look
- Integrated front panel height adjustment
- Very easy, quiet running action
- Attractive price

Quality that pays:

- Consistently smooth running action from a profile geometry that evens out tolerances
- High precision runners for stability and reliability
- Quality that impresses while and after purchasing
- Long life

More options, more sales:

- Easily upgraded to Quadro runners with Silent System thanks to platform concept
- Identical wooden components for lean production
- Efficient access to new market segments

Better safe than sorry:

- Automatically locking and unlocking lift off guard
- Standard on full extension runners, optional on partial extension runners
- High installation reliability even in flat packed furniture

Drawer runners for wooden drawers

► Quadro drawer runners with Stay Close

The smart shopper target group is huge. It wants extremely low price furniture but accepts no compromising on quality. This is precisely where your furniture can score from Quadro with Stay Close: a concealed runner instead of visible ball

bearing runners or roller runner systems. Concealed, quiet, smooth running, long lasting and, doing without any self closing mechanism, surprisingly inexpensive. Quadro with Stay Close – a powerful competitive edge for your furniture.

Quadro:
Precision engineered for strength and excellent running quality

For an impressive look:
Concealed runners

For all demands:
Partial and full extension runners in many lengths

For very easy installation:
Plug on principle for wooden drawers

For attractive reveal alignment:
Integrated height adjustment

For maximum safety:
Self engaging lift off guard

Drawer systems

► Quality criteria

Quality that meets all the demands

The quality of the drawer systems is monitored continuously. Hettich fittings comply with the national and international quality standards of the markets our customers operate in. The diagrams below show some of the tests Hettich fittings are required to pass.

Application

Hettich drawer systems are suitable for use in living room, kitchen, bathroom and office furniture both in the home and business environment.

Load capacity and pull-out guard

The load capacity (to DIN EN 15338) stated in the catalogue is understood to mean the weight of the drawer itself including panel and contents in kg. The applicable level is shown on the product. Load capacity relates to a reference length of 500 mm. The load capacity may vary for other lengths. All Hettich drawer systems feature guards to prevent the drawer from rolling out and being removed unintentionally and

meet the requirements of the impact test in a test frame to EN 15338. Fitted in the proper manner, the drawer systems are suitable for furniture defined in EN 14749. The maximum front panel height is governed in particular by material, drawer size and drawer runner. Testing is conducted on drawers with a 130 mm front panel height and pot-and-pan drawers with a 300 mm front panel height. We will be pleased to provide any further information you may require.

Corrosion test

Hettich runner systems satisfy the requirements on corrosion defined in EN 15338, 72-hour condensation water test to EN 6270.

Wear test

The fully laden drawer must remain in proper working order after opening and closing it for a defined number of times at a defined test velocity.

Retention-on-opening test

The fully laden drawer is abruptly opened all the way several times at a defined test velocity.

Horizontal load test

Opened all the way, the fully laden drawer is additionally exposed to horizontal strain from a defined lateral force.

Vertical strain test

Opened all the way, the drawer is additionally exposed to vertical strain from a defined eccentric force.

Hettich and the environment: committed to responsible practice, active protection, innovative thinking.

Hettich accepts responsibility for the world we live in. This awareness defines the strict policy of environmental management we practise. Our environmental officer has taken personal responsibility for these aspects throughout the group of companies over a period of many years. In addition, a separate environment committee has been established for each production site. We regard statutory provisions as minimum requirements. At significant sites we also implement the stringent EMAS Regulation. And we drive forward developments that in future will help to save even more raw materials and support the necessary endeavours towards sustainability.

Hettich standard for product materials

Hettich underpins its commitment by applying an internal standard for product materials. This ensures that every product – from production to disposal – satisfies all environmental requirements. Hettich products are durable. Appropriately foresighted, our rigorous standards are formulated to ensure that international legislation is met as well. This provides a reliable basis for marketing furniture worldwide.

Hettich environmental management

In 1996 Hettich started introducing effective environmental management systems under the stringent EMAS Regulation (currently: EC Regulation No. 761/2001, including EN ISO 14.001/2004). This not only enables us to improve our environmental performance on a broad front but also achieve a high level of safety which, not least, also benefits our customers. This is why we also require our suppliers to meet the necessary minimum standards of environmental protection, industrial safety, health care and social welfare.

The results achieved in the drawer runner and drawer system product segment at the Kirchlegern operation illustrate the impressive effects these measures have and verifiably demonstrate our tireless endeavours to translate words into action:

Relief to the environment between 1997 and 2008:

Specific water consumption:	56 per cent
Specific power consumption:	21 per cent
Specific heat consumption:	84 per cent
Specific CO ₂ emissions:	29 per cent
